

BeyondVoice® with SIPconnect

Together Aastra and Cbeyond provide a focused solution for serving the needs of small businesses. The AastraLink RP™ Solution provides small businesses the convenience and affordability of a feature-rich PBX telephone system paired with Aastra enterprise grade phones. The easy-to-use system enables effective and efficient employee and customer communication as well as seamless integration when it comes time to complement your growing business.

AastraLink RP™ is a Microsoft® Response Point™ phone system that is a powerful, easy-to-use communications solution designed specifically for small business. The combination of Microsoft's unique, voice-enabled telephony software and Aastra's robust, feature-rich phones offers a complete, reliable and scalable telephone system. Leveraging our extensive experience in the telephony industry, Aastra delivers the most comprehensive and complete end-to-end Response Point system solution available in the market today.

Targeted for 50 users and under, the system is comprised of three components: an Aastra designed Base Unit, Gateway and Aastra Response Point IP phones. With features such as auto-discovery and auto-configuration, setting-up or changing the system can be done by

AastraLink RP™ A Microsoft® Response Point™ Phone System

an average PC user in minutes. For users, a voice-enabled user interface, advanced call routing, built-in voicemail, Automated Receptionist and contact integration with Microsoft Office Outlook® offer simplified access to advanced large scale PBX features.
